

NICKOLIS KACLUDIS

Aspiring Software Developer | U.S. Army Veteran | Self-Taught Full-Stack Engineer

Fishers, IN • (623) 693-0189 • nickoliskacludis@gmail.com • linkedin.com/in/nickolis-kacludis • github.com/NickolisK24

SUMMARY

Self-taught full-stack engineer with eight years of U.S. Army logistics leadership and an A.A.S. in Computer Systems & Applications. Build production-grade applications in Python, TypeScript, and PostgreSQL - including a baseball analytics platform with a custom fatigue-scoring engine and a build-simulation tool with six interconnected calculation engines. Looking for a junior or associate developer role where I can contribute to real systems, learn from senior engineers, and bring the discipline, ownership, and follow-through I built in the military.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS, Java, C++, C#

Backend: Flask, FastAPI, Node.js, REST APIs, SQLAlchemy, Alembic

Frontend: React, TailwindCSS, Vite, responsive UI

Data & Infra: PostgreSQL, Redis, Git/GitHub, pytest, Vercel, Neon

Other Tools: Salesforce, Microsoft Office, Linux/CLI, Git/GitHub workflows

TECHNICAL PROJECTS

BaseballOS — Full-Stack Baseball Analytics Platform

Personal Project | github.com/NickolisK24

Python · Flask · PostgreSQL · React · TailwindCSS · MLB Stats API

- Designed and built a **fatigue scoring engine** using a weighted composite model across pitch counts, back-to-back appearances, and recent workload, output as risk tiers consumable by a React dashboard.
- Built ingestion pipelines against the live MLB Stats API, normalizing pitcher appearances and game data into a relational PostgreSQL schema.
- Modeled a five-table backend (players, teams, games, game_pitchers, pitcher_appearances) with Alembic migrations and a clean Flask blueprint structure.
- Surfaces bullpen usage patterns and prospect insights through a React + Tailwind frontend; structured as the lead portfolio piece for a baseball-industry pivot.

The Forge — Build Optimizer & Combat Simulator (Last Epoch)

Personal Project | github.com/NickolisK24

FastAPI · PostgreSQL · React · TypeScript · Redis · Alembic · pytest

- Designed and built a **patch-resilient game data pipeline** that parses raw Last Epoch game files (XML/JSON/binary) into a normalized PostgreSQL schema; covers passives, skills, items, affixes, uniques, blessings, ailments, monster mods, and timelines.
- Implemented a `sync_passives()` function with namespaced node IDs and re-runnable ingest jobs, so the database stays correct across game patches without manual data fixes — the same shape of problem as ingesting any external data feed.
- Architected a layered backend with six pure, stateless calculation engines (**stat, combat, defense, craft, simulation, passive**) backed by a typed React/TypeScript client and disciplined API contracts.
- Built a Monte Carlo crafting engine (fracture-risk math, optimal-path search, 3-strategy comparison), an SVG-based passive tree renderer, and a stat resolver that consumes the extracted data.
- Commissioned and acted on a professional code review: refactored data duplication, rate-limited CPU-intensive endpoints, split a 1,100-line component, and standardized auth-token handling.

PROFESSIONAL EXPERIENCE

Coca-Cola Consolidated — Merchandiser

Indiana | 2025 – Present

- Manage product flow, inventory accuracy, and merchandising standards across a multi-store route on a strict daily schedule.
- Coordinate with store managers and delivery drivers to resolve stocking issues and keep displays compliant with brand standards.

Walmart — Overnight Stocking Associate

December 2021 – April 2025

- Trained and onboarded new associates on stocking standards and nightly throughput goals.
- Maintained inventory accuracy, built endcap displays, and supported planogram resets to improve store presentation.

- Partnered with team leads to prioritize tasks and streamline workflow during high-volume overnight shifts.

U.S. Army — Heavy Wheeled Truck Driver (88M)

May 2014 – August 2021

- Coordinated mission-critical logistics and transport operations, consistently delivering accurate results under tight deadlines.
- Oversaw armory operations with full accountability for vehicles, equipment, and small arms — zero discrepancies across multiple inspections.
- Maintained detailed maintenance logs in compliance with safety, regulatory, and operational standards.
- Trained and mentored junior soldiers in maintenance procedures and operational discipline, strengthening team performance.

Custom PC Builder / Hardware Technician

January 2018 – Present

- Build and configure custom desktops; diagnose hardware/software issues and select compatible components for performance targets.
- Install and optimize operating systems and software for reliable, efficient end-user systems.

EDUCATION

Yavapai College — Prescott, AZ

August 2022 – May 2024

Associate of Applied Science, Computer Systems & Applications

ADDITIONAL

- **Veteran:** 8 years U.S. Army (88M, Heavy Wheeled Truck Driver). Honorable service 2014–2021.
- **Currently building:** RosterEdge — Next.js 15 / Drizzle / Postgres / Stripe SaaS for fantasy baseball analytics.
